

**HUB TÉLÉCOM is proud to announce its participation  
in a themed conference on 22nd March at 9.40 a.m. on:**

**"New airport IT&T services"**

**at the PASSENGER TERMINAL EXPO 2006 international exhibition,  
from 21st to 23rd March 2006  
at the Paris-Nord Villepinte Exhibition Center, Hall 2.**

Hub télécom, the leading telecom service provider for complex sites, is proud to announce its presence on stand 5390, at the 10th edition (2006) of the Passenger Terminal Expo exhibition. On this occasion, and as part of the session, "Moving at the speed of light: new technologies for passengers, airports and airlines", Hub telecom will be taking part in a themed conference entitled:

**"The New airport IT&T services"  
by Dominique Valentiny, Managing Director of Hub télécom,  
on Wednesday 22nd March 2006, from 9.40 to 10.10 a.m.**

In order to be attractive, airports must provide advanced communication technologies to the companies present on their platform. On the one hand, it is a matter of security and availability of information. On the other hand, the entire efficiency of the airport is at stake. Thanks to technology such as Wi-Fi, WiMAX, RFID, and IP networks, a whole series of new opportunities have opened up for airports: development of mobile business applications, system traceability, mobile Internet communication, video surveillance using IP, and more. New technologies enable new services to be developed, and they also facilitate network design and management, which is a considerable advantage in constantly evolving airport environments. Based on a case study and the testimony of Aéroports de Paris, this presentation will demonstrate how new technology improves airport efficiency and attractiveness.

Hub télécom will use this occasion to share its expertise in the field of communication solutions and services for complex business sites.
